

Wi-Fi Friendly

Technology driven formula for supreme vision.

natureVUE™
HIGH DEFINITION CERAMIC

Empowered by a revolutionary manufacturing process, NatureVue window film utilizes advanced ceramic coatings to selectively filter solar energy while providing high definition optics that enhance your natural views.

Ceramic coating technology is well known for its superior performance and durability when exposed to the sun's extreme energy. It provides excellent heat rejection and UV ray protection, without the harsh mirror-look normally associated with conventional metallised window films. Additionally, advanced ceramics are signal friendly and will not interfere with your Wi-Fi or mobile phone reception.

A popular choice for home and building owners that desire a subtle window treatment, NatureVue features a soft, neutral tone that does not alter the visual appearance of glass. It also helps preserve room ambience and filters the sun's annoying glare without sacrificing your natural day light.

NatureVue is available in a range of neutral colour densities that provide varying levels of performance and solution options. It is non-fading, non-corrosive in coastal areas and will provide excellent performance for many years of protection.

NatureVue - technology driven formula for supreme vision.
