Creative Vision from Metamark

Retail signage applications, corporate identity and privacy screening, the Metamark Etch Effect vinyl range offers a realistic, high quality, cost effective replacement for traditional acid etching or sandblasting methods.

Why Metamark Etch Effects?

Metamark manufactures a range of etched glass effect films offering a superb choice of authentic finishes. Whether you're applying wet or dry, for total coverage or cut and applied detailing, Metamark's proprietary solvent adhesive system ensures sparkling results without a trace of adhesive visibility. Metamark etch glass effect films have a 'Class B' European fire classification [BS EN 13501-1:2007].

MetaScape For faster, trouble-free application of larger areas on flat or slightly curved surfaces, the MetaScape Adhesive System provides air with an exit route from under the graphic.

Warranty Metamark products are manufactured to ISO9001/2000 quality standards and backed by a full warranty which is available on the web site. Technical data sheets can be downloaded from www.metamark.co.uk/technical

Metamark. The Materials Company

etcheffect®

Frost

Metamark Frost provides an authentic acid etched glass effect suitable for many glass decoration applications. Metamark Frost is a cost effective solution for covering larger areas such as office partitions or creating partial privacy within pubs and restaurants. The solvent based adhesive ensures trouble-free wet application.

- 80 micron
- Monomeric Calendered Film
- Solvent based adhesive
- Durability 3 years
- Fire Rating - Class B
- Light Transmission 85%

Dusted Etch

Dusted Etch is one of three premium quality etch effect films from Metamark. Dusted Etch provides the lowest level of obscurity, making it the ideal choice where only a subtle etched result is required and maximum light transmission maintained.

- 70 micron
- Polymeric Calendered Film
- Apex Solvent based adhesive
- Durability 7 years
- Fire Rating - Class B
- Light Transmission 88%

Silver Etch

A premium quality etched glass effect film, offering a high level of opacity and providing excellent definition on decals. The 70 micron face film allows for fine detail cutting and weeding, whilst the solvent based adhesive ensures trouble free wet application.

- 70 micron
- Polymeric Calendered Film
- Apex Solvent based adhesive
- Durability 7 years
- Fire Rating - Class B
- Light Transmission 56%

Crystal Etch

Providing an attractive alternative finish to the Silver Etch with its subtle glitter effect, Crystal Etch is suitable for fine decals, providing privacy, or to create a contrasting effect when used with other Metamark etch effect films. It's easy to cut and weed and Metamark's solvent adhesive system ensures trouble free application and sparkling results.

- 70 micron
- Polymeric Calendered Film
- Apex Solvent based adhesive
- Durability 7 years
- Fire Rating - Class B
- Light Transmission 57%

Opal Haze

Metamark Opal Haze has been specifically formulated to provide a whiter, Brighter acid etched glass effect without any hint of sparkle, it is suitable for many glass decoration applications, is easy to weed and cut and is a great quality option for covering larger areas to create privacy while Metamark's solvent adhesive system ensures trouble free application and great results.

- 80 micron
- Polymeric Calendered Film
- Solvent based adhesive
- Durability 7 years
- Fire Rating - Class B
